

## **TK+/TPK+ – The NEW Precision**

TK+ Low-Backlash Hollow-Shaft Flange Gearhead  
TPK+ Low-Backlash Right-Angle Gearhead

2006 - I

**alpha**

a WITTENSTEIN AG company

## TK+/TPK+ – The key to a new design freedom

The new right-angled gearheads **TK+/TPK+** from alpha brings you a new innovation potential – for your machine productivity as well as possible design solutions. Its combination of an ISO robot flange and a hollow-shaft in the same unit gives you a maximum of design freedom – for turntables, grippers, tool changers and tilting axes. With the **TK+/TPK+** you can even build your own linear actuator using standard servo motors.

The **TPK+** offers for higher ratios extra-high positioning precision and power density, which opens up yet another host of innovation opportunities: lighter and faster travelling axes, replacement of cam turntables, increased robot productivity on the 7th axis, downsized positioning drives, and much more.

With the hypoid gear technology of the **TK+/TPK+**, we have overcome the traditional limitations of bevel gears. With the + we bring you more torque, a lower noise level and increased productivity.

Let yourself be inspired.

Your advantages at a glance:

High-speed continuous operation in packaging machinery.

Dynamic cyclic operation in automation applications.

Optimal smooth running in printing and converting machinery.

Our system solution alpha rack & pinion in combination with the **TK<sup>+</sup>/TPK<sup>+</sup>** is optimal for handling automation as well as the 7 axis for industrial robots.

With the advanced **TK<sup>+</sup>/TPK<sup>+</sup>** right-angle gearhead we offer you new technical and economical opportunities to suit your creativity.

## TK+/TPK+ – opens new doors

### Higher productivity

Do you demand maximum productivity from your machine?

With up to 200 % more torque and 100 % higher speeds than comparable products, the TK+/TPK+ offers the optimum performance for maximum output.

### Simple and convenient

From an optimised design with our cymex software, to our patented alpha motor mounting system and identical oil flow rates for all mounting orientations: the TK+/TPK+ pulls out all the stops to make your job as easy as possible.

## Cutting edge innovations – made by alpha

We have been developing, manufacturing and distributing low-backlash planetary gearheads, servo right-angled gearheads, complete drive units and planetary elevator machines with an integrated servo motor since 1984. Profit from our comprehensive service package: from individual components to complete systems, supported by our competent engineering services. Nearly thousand employees worldwide get involved with offering this service to you. alpha's headquarters are on the "Romantic Road" in Igersheim / Germany.

alpha is a member of the WITTENSTEIN AG Group which has rightly established a name for itself with numerous innovations in industries such as aerospace and simulation, medical technology, elevator drives and Formula One racing.

### Extraordinarily robust

The TK<sup>+</sup>/TPK<sup>+</sup> is extremely reliable thanks to its ultra-rugged overall design and 100 % alpha inspection – "fit it and forget it". With integrated thermal length compensation, the TK<sup>+</sup>/TPK<sup>+</sup> also maximises the service life of your servo motor in high-speed continuous duty.

### Compact and totally flexible

A right-angle drive with the TK<sup>+</sup>/TPK<sup>+</sup> makes your machine more compact. With reduction ratios from  $i = 3$  to  $i = 100$  (TK<sup>+</sup>) and  $i = 12$  to  $i = 100$  (TPK<sup>+</sup>) with the TP<sup>+</sup> output – the industry standard from alpha – it represents an attractive alternative for almost any design concept.

### Reliable and precise

The low torsional backlash and high torsional stiffness of the TK<sup>+</sup>/TPK<sup>+</sup> assure the positioning accuracy of your drives and therefore the precision of your machines, even in highly dynamic operations with up to 50,000 cycles/hour.

TPK<sup>+</sup>

### Leaders of the pack

We are driven by a desire to enhance our customers' success with products and systems from alpha. We set benchmarks when it comes to precision, performance and durability. Our trailblazing technology gives our customers an edge in their respective market sectors. Place your trust in premium quality and total reliability from alpha. Choose world class engineering – the foundation for strong partnerships and added value that is passed on to your customers.

### alpha benefits at a glance:

- **Record-breaking lifespan**  
Extremely long service life resulting from intelligent design, latest synthetic lubrication technology, exclusive sealing technology, and incredibly strong output bearings.
- **Motor mounting is almost foolproof**  
Simple and reliable mounting in a single step.
- **Top quality from alpha**  
In-house development and manufacture of all products combined with a pioneering spirit and an insatiable urge to improve.

alpha

\* Higher mean speeds are possible at reduced nominal torque.

\*\* Please reduce the speed at higher ambient temperatures.

\*\*\* No load running torque decrease in operation.

\*\*\*\* In reference to the centre of the output flange

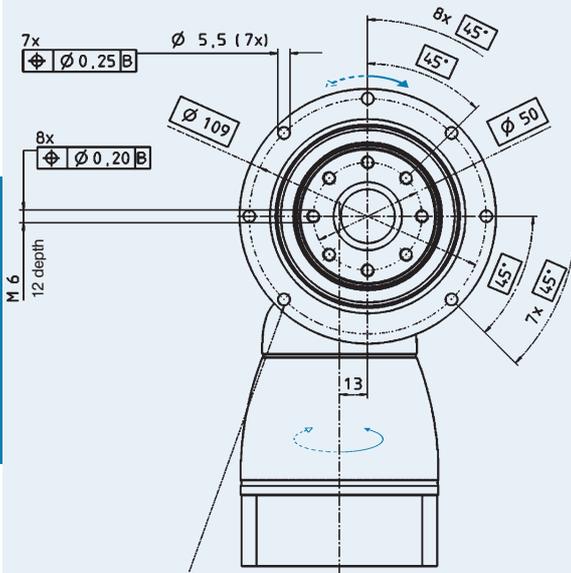

\*\*\*\*\* Measured at ratio  $i = 5$  (without load)

Please contact alpha for information about S1 operating conditions (continuous duty).

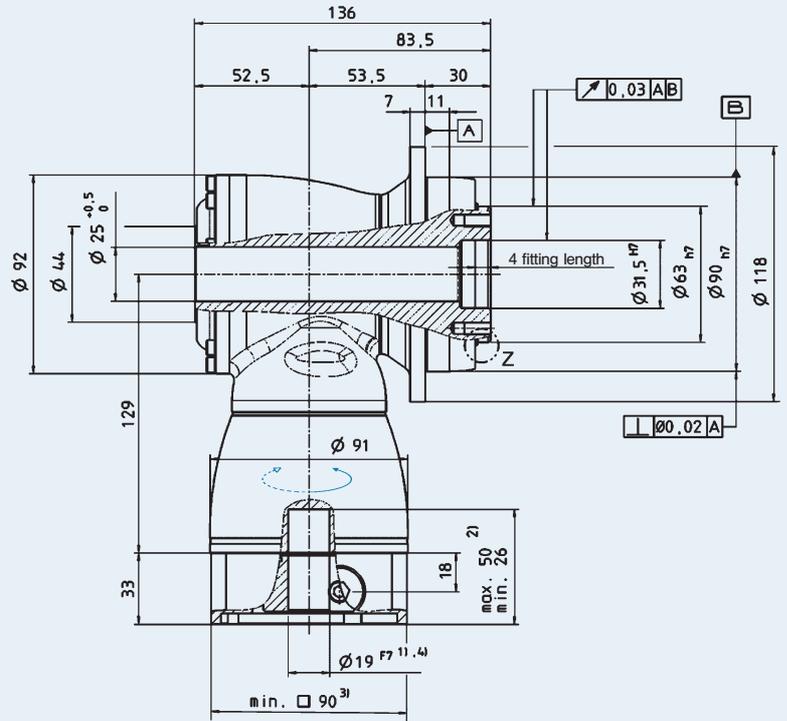

### Conversion table

|                     |  |
|---------------------|--|
| 1 mm                | = 0.039 in                                   |
| 1 Nm                | = 8.85 in.lb                                 |
| 1 kgcm <sup>2</sup> | = $8.85 \times 10^{-4}$ in.lb.s <sup>2</sup> |
| 1 N                 | = 0.225 lb <sub>f</sub>                      |
| 1 kg                | = 2.21 lb <sub>m</sub>                       |

## 1-stage

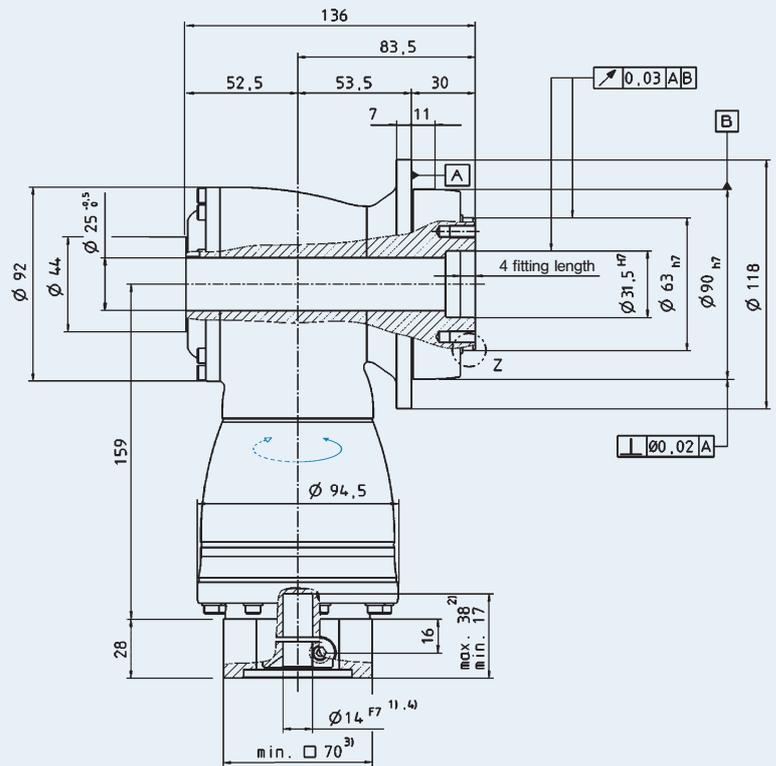

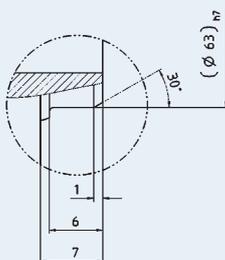

For 7x screw M5 / strength category 12.9

## 2-stage

Z: Detail

Non-toleranced dimensions  $\pm 1$  mm

1) Check motor shaft fit.

2) Min./max. permissible motor shaft length. Longer motor shafts are possible on request: please contact alpha.

3) Dimensions depend on motor.

4) Smaller motor shaft diameters possible using a bushing with a minimum wall thickness of 1 mm (see page 26).

 Motor mounting in accordance with Operating Manual

| 1 kg                | = 2.21 lb <sub>m</sub>                       |

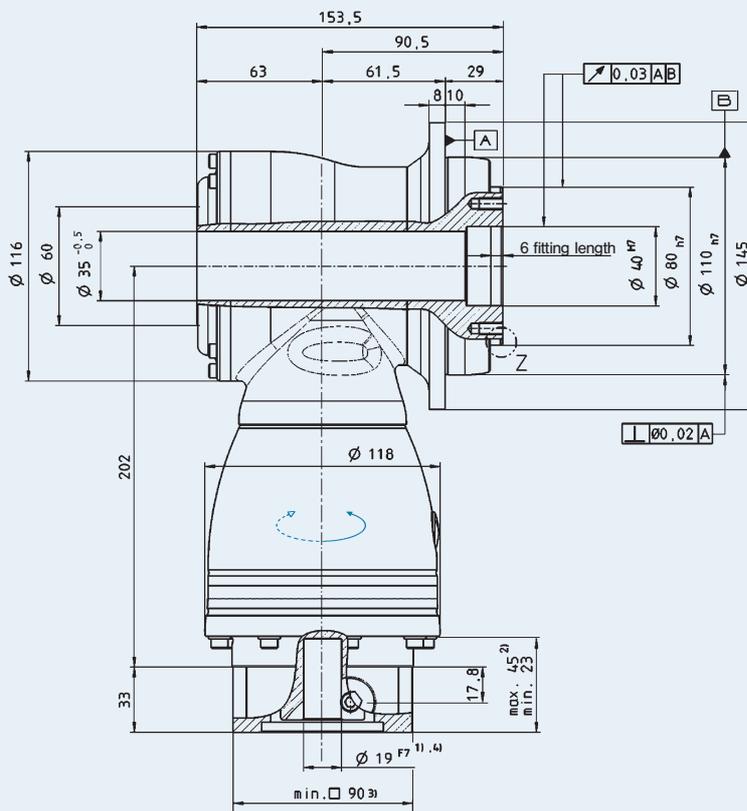

1-stage

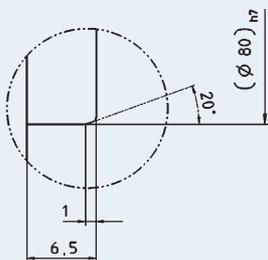

For 7x screw M5 / strength category 12.9

2-stage

Z: Detail

Non-toleranced dimensions ±1 mm

- 1) Check motor shaft fit.
- 2) Min./max. permissible motor shaft length. Longer motor shafts are possible on request: please contact alpha.
- 3) Dimensions depend on motor.
- 4) Smaller motor shaft diameters possible using a bushing with a minimum wall thickness of 1 mm (see page 26).

▲ Motor mounting in accordance with Operating Manual

\* Higher mean speeds are possible at reduced nominal torque.

\*\* Please reduce the speed at higher ambient temperatures.

\*\*\* No load running torque decrease in operation.

\*\*\*\* In reference to the centre of the output flange

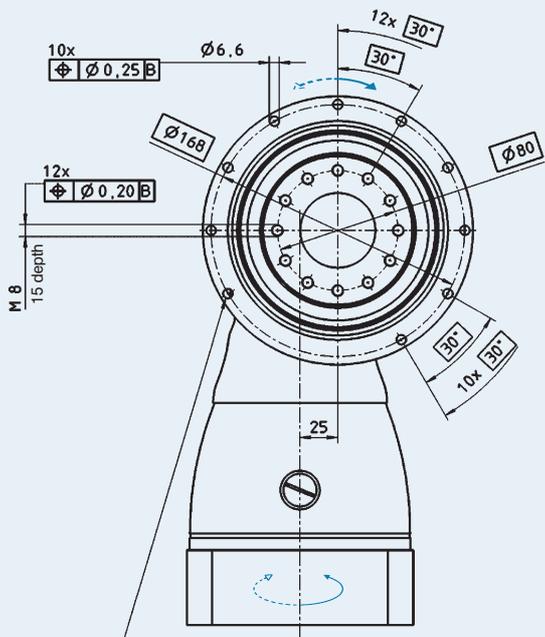

\*\*\*\*\* Measured at ratio  $i = 5$  (without load)

Please contact alpha for information about S1 operating conditions (continuous duty).

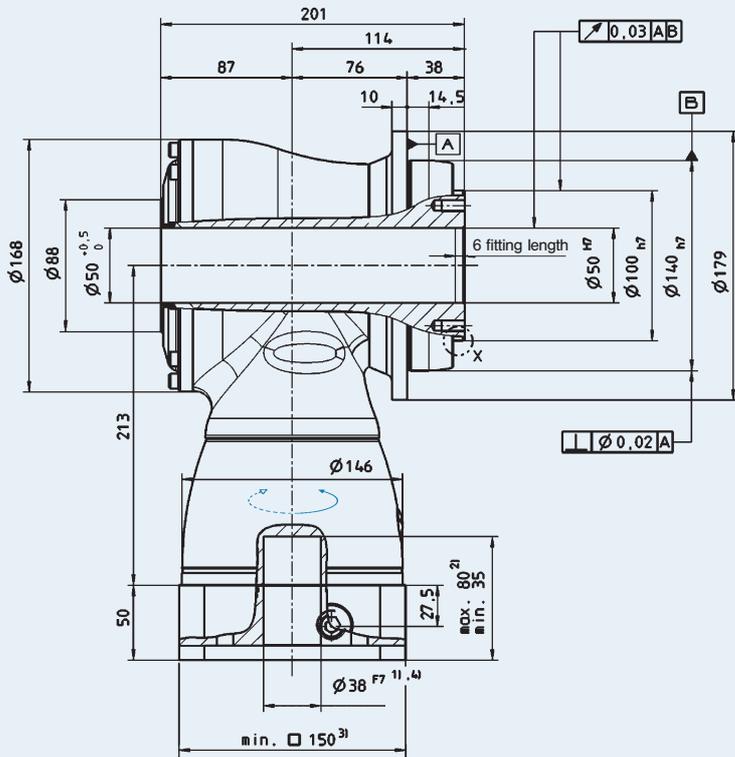

#### Conversion table

|                     |  |
|---------------------|--|
| 1 mm                | = 0.039 in                                   |
| 1 Nm                | = 8.85 in.lb                                 |
| 1 kgcm <sup>2</sup> | = $8.85 \times 10^{-4}$ in.lb.s <sup>2</sup> |
| 1 N                 | = 0.225 lb <sub>f</sub>                      |
| 1 kg                | = 2.21 lb <sub>m</sub>                       |

\* Higher mean speeds are possible at reduced nominal torque.

\*\* Please reduce the speed at higher ambient temperatures.

\*\*\* No load running torque decrease in operation.

\*\*\*\* In reference to the centre of the output flange

\*\*\*\*\* Measured at ratio  $i=5$  (without load)

Please contact alpha for information about S1 operating conditions (continuous duty).

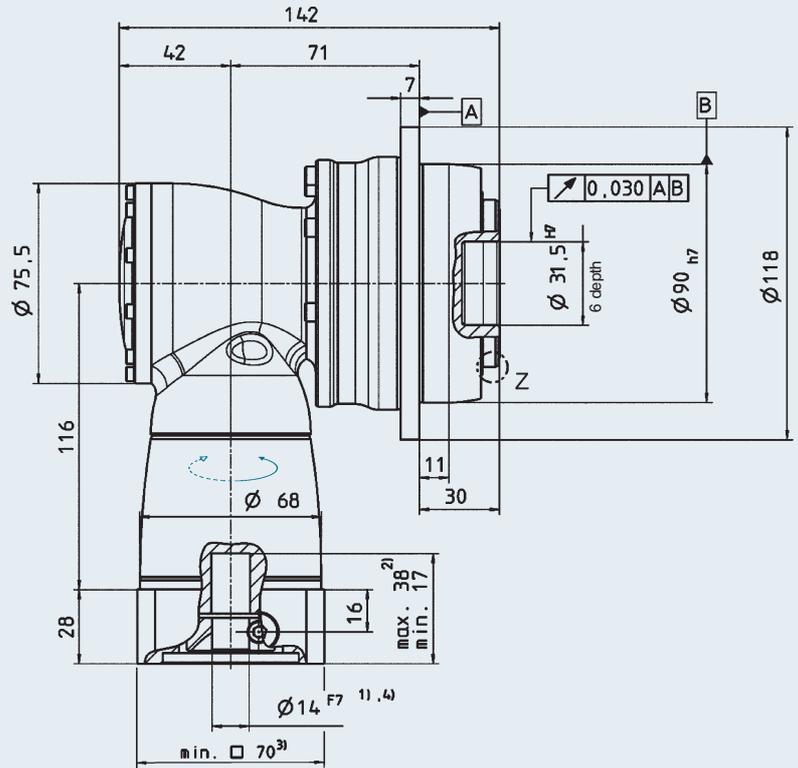

#### Conversion table

|                     |  |
|---------------------|--|
| 1 mm                | = 0.039 in                                   |
| 1 Nm                | = 8.85 in.lb                                 |
| 1 kgcm <sup>2</sup> | = $8.85 \times 10^{-4}$ in.lb.s <sup>2</sup> |

| 1 kg                | = 2.21 lb <sub>m</sub>                       |

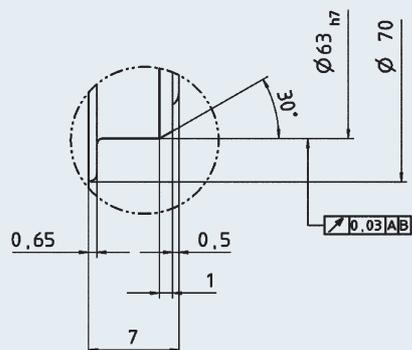

## 2-stage

For 8x screw M5 / strength category 12.9

## Z: Detail

Non-toleranced dimensions  $\pm 1$  mm

1) Check motor shaft fit.

2) Min./max. permissible motor shaft length. Longer motor shafts are possible on request: please contact alpha.

3) Dimensions depend on motor.

4) Smaller motor shaft diameters possible using a bushing with a minimum wall thickness of 1 mm (see page 26).

 Motor mounting in accordance with Operating Manual

## 2-stage

For 12x screw M8 / strength category 12.9

## Z: Detail

Non-toleranced dimensions  $\pm 1$  mm

1) Check motor shaft fit.

2) Min./max. permissible motor shaft length. Longer motor shafts are possible on request: please contact alpha.

3) Dimensions depend on motor.

4) Smaller motor shaft diameters possible using a bushing with a minimum wall thickness of 1 mm (see page 26).

⚠ Motor mounting in accordance with Operating Manual

## TK+/TPK+ innovations:

### Extremely easy and reliable motor mounting

The motor shaft is simply clamped with a single bolt

### Oil flow rate independent of the installation position

The revolutionary design principle means the installation position no longer has to be specified in the purchase order.

## Symbols and Index

| Symbol | Unit              | Designation            |
|--------|-------------------|------------------------|
| C      | Nm                | rigidity               |
| F      | N                 | force                  |
| i      | -                 | ratio                  |
| j      | arcmin            | backlash               |
| J      | kgcm <sup>2</sup> | mass moment of inertia |
| L      | h                 | service life           |
| M      | Nm                | moment                 |
| n      | min <sup>-1</sup> | speed                  |
| $\eta$ | %                 | efficiency             |
| T      | Nm                | torque                 |

## Index

|         |                 |
|---------|-----------------|
| 1       | input           |
| 2       | output          |
| A/a     | axial           |
| B/b     | acceleration    |
| h       | hours           |
| K/k     | tilt            |
| m       | mean            |
| Max/max | maximum         |
| Mot     | motor           |
| N       | nominal         |
| Not/not | emergency stop  |

## Quick Gear Selection

The following chart can be used to quickly select a gearhead. However, for best results, we recommend that you utilise the gearhead selection charts in the **alpha Technical Basics** catalogue (can be downloaded from [www.alphagetriebe.com](http://www.alphagetriebe.com)) or use alpha's **cymex® 3.0** servo/gearhead sizing software to design your drive train.

- Select next higher letter  
+ Select next larger gearhead

\* If your motor shaft diameter is not listed, add 2 mm to diameter and select next higher size.  
\*\* Geometry not shown in the drawings; dimensions available upon request.

## Bushing

If the diameters of the motor shaft and the clamping hub do not match, a bushing is used. Minimum wall thickness of the bushing is 1mm.

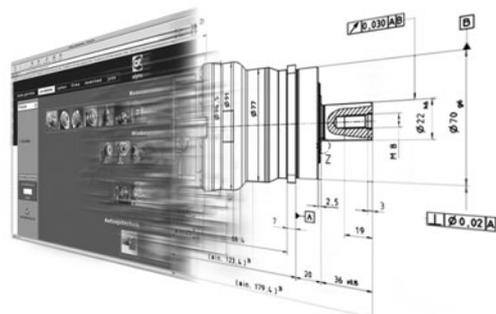

alpha's cymex® calculation software makes it easier than ever to design the most complex drive trains with just a few mouse clicks.

### application – gearhead – motor

cymex® simplifies technical documentation, and customised engineering designs are possible at any time thanks to data in DXF format.

Use cymex®.  
easy – quick – reliable

## Additional **alpha** products

### TP+ & TP HIGH TORQUE® – Compact Precision

Low-backlash planetary gearheads with output flange. Torsional backlash  $\leq 1$  arcmin. Acceleration torque up to 10,000 Nm. TP HIGH TORQUE best qualified for highest positioning accuracy and high-dynamic cycle operation.

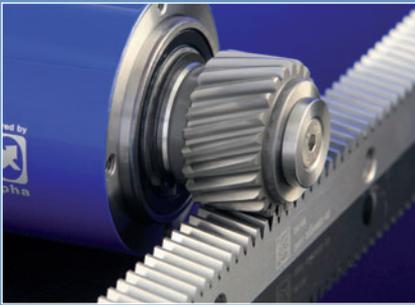

### SP+® & SP+ HIGH SPEED® – The NEW Generation

Low-backlash planetary gearheads with output shaft. Torsional backlash  $\leq 1$  arcmin. Acceleration torque up to 3400 Nm. SP+ HIGH SPEED best qualified for highest speed in continuous operation.

### LP+ & LPB+ – Value Line

Low-backlash gearheads with output shaft for economical servo applications. Torsional backlash  $\leq 10$  arcmin. Acceleration torque up to 450 Nm. Optional available as LPB+, with geared pulley mount.

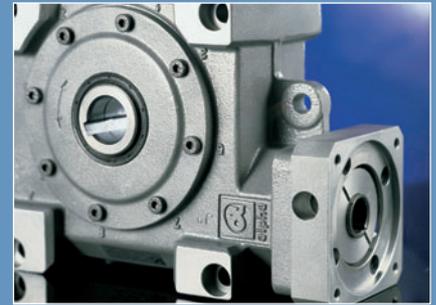

### Rack & Pinion Systems

Precision Rack and Pinion solutions in 3 grades for individual servo applications. Premium Class – well proven in high dynamic precision. Smart Class – performance with flexibility. Value Class – powerful in economic precision.

### Hypoid Gearhead

Right-angle gearhead of highest precision and compactness. Torsional backlash  $\leq 4$  arcmin. Acceleration torque up to 640 Nm. Output shaft variations: SK+: smooth, keywayed, involute toothing to DIN 5480, TK+: flange HG+: hollow shaft

### V - Drive®

Right-angle gearhead – short and compact. Torsional backlash  $\leq 3$  arcmin. Acceleration torque up to 718 Nm. Options output: VDS: smooth, keywayed, involute toothing to DIN 5480, VDT: flange VDH: hollow shaft smooth or keywayed.

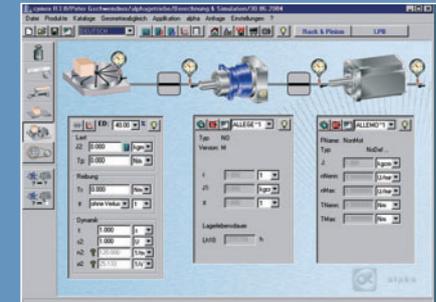

### Coupling – TL / BC / EC

Patented, backlash-free, compact and torsionally stiff metal bellows and safety couplings. Acceleration torque up to 10,000 Nm. Disengagement in 1 - 3 ms. Belt tension 100 - 12,000 N. Self-adjusting.

### alphira® – Precision Made Simple

Low backlash · high rigidity · alpha quality. Ideal for simple servo applications. Acceleration torque up to 200 Nm.

### cymex® 3.0

The software for drive technology. Design a complete drive train with a few mouse clicks. Up to 80 % time saving.
